

PROJECT PROFILE: H.O.P.E. ON NINTH APARTMENTS NOVABRIK: ARLINGTON BLEND SMOOTH FACE

The Place of Hope campus located in St. Cloud, Minnesota provides housing for 140 people and provides over 240 free meals daily. They provide immediate, permanent, and transitional housing for community members in the St. Cloud area. For this project, Sand Companies used NovaBrik® Smooth Face mortarless brick. This mortarless brick siding is a unique system composed of tongue-in-groove units made of high-strength concrete with a rockface or smooth face texture. Because Novabrik hangs on the wall, no brick ledge or steel angle is necessary for support at the base of the wall or above openings.

CUSTOMER TESTIMONY

“The Novabrik product line provided exactly what we needed – a durable, maintenance-free exterior siding material that we needed for our apartment building that we were able to install in the cold weather to keep our project within budget and get it opened on time to help people that need supportive housing services.”

–Pastor Carol, Place of Hope Ministries
