

PROJECT PROFILE: PULTE HOMES

Pulte Homes in Brooklyn Park, Minnesota recently began a 10 foot high sound wall along Highway 610 in order to protect the new development from highway noise. The wall was constructed using [Allan Block's AB Fence®](#) manufactured by Amcon Concrete Products®.

AB Fence® by Allan Block® is a mortarless concrete fence system that uses maintenance free, interlocking block to create an attractive and effective solution for sound abatement, security, privacy,

and more. With the system's multiple sizes, AB Fence has flexible design options to create clean, crisp architectural walls which install quickly and easily.

Additionally, TCC Materials provided [Spec Mix® Fine Corefill Masonry Grout](#) to fill the posts and to create bond beams at the bottom, middle, and top of the wall. The job is scheduled to be completed by the end of June.

For more information on Allan Block's AB Fence or TCC Materials' Corefill grout options, please visit the links above or [contact us](#) at info@amconconcreteproducts.com.
