

Travertina™

Amcon Concrete Products & TCC Materials partnered with Hebron Brick to supply Amstone® Travertina™ Architectural Series concrete masonry units and Spec Mix colored mortar to the newly-constructed Orton's Convenience Store located in Audobon, Minnesota. Founded in 1950, Orton's has locations throughout the Midwest and plans to expand by adding additional stores in 2022. Customers will also see Travertina showcased on Orton's Walker, Minnesota and Bemidji, Minnesota locations.

The AmStone Travertina Architectural Series features a unique, multi-dimensional burnished, recessed face texture similar to travertine stone, but with the economy of a CMU. The project began in March of 2021 when Amcon provided roughly 2,8000 blocks to Hebron Brick for the job. Travertina was chosen for this location because Orton's wanted to mimic the look of cut stone. TCC Materials also provided Spec Mix colored mortar for the project to complement the unique CMU color. The location opened in May of 2021.

Amcon sales representative Tab Meyer worked with Hebron Brick to get the job done. "The project was an overall success and the appearance of the Travertina block looks great. It was fun to be part of a project like this one."
