

Masonry Materials

The South Dakota Department of Transportation partnered with TCC Materials as important suppliers on their most recent rest area project. The rest area lies close to the border of Minnesota and South Dakota along I-90 in Valley Springs, South Dakota who's motto is "The Front Door to South Dakota." Completed in 2020, this rest area serves as a Welcome Center to visitors and includes multiple products coming from various TCC plants in the area:

- Colored Splitface Block
- Burnished Block
- Mammoth Stone
- Spec-Brik® Concrete Masonry Unit
- Spec Mix® Colored Mortar
- Structural Concrete Block
- Integral Water Repellent

"This project is the perfect example of what we work toward everyday—showing designers how architectural concrete masonry can meet their needs for beauty, structural support, and longevity. It was really great to see how our production staff came together, from multiple different production facilities, to collaborate on this project." -Bob Matzke, TCC Sales Representative
