

Travertina™

TCC Materials partnered with Lanz Masonry & Concrete to supply Amcon Travertina Architectural Series concrete masonry units along with the colored mortar for the newly constructed Woodland Hill Senior Living in Hudson, WI.

The design of the building required a unique aesthetic element on the concrete masonry portion. Amcon Travertina Series fit the design demand with its multi-dimensional burnished, recessed face texture that mimics the look of travertine stone, but with the economy of a CMU. The block was also selected for this project due to its resemblance to cut-stone.

In addition to the Travertina CMUs, TCC Materials also supplied the project with:

- Architectural Precast Sills
- Concrete Block
- Colored Mortar
- Allan Block Segmental Retaining Wall Units

TCC Materials sales representative, Tab Meyer, helped coordinate the job. “The job went really well. It was a large project so it took about 4-5 months to put all the product on. Overall, it was a success.”
