

# ARCHITECTURAL TEXTURES

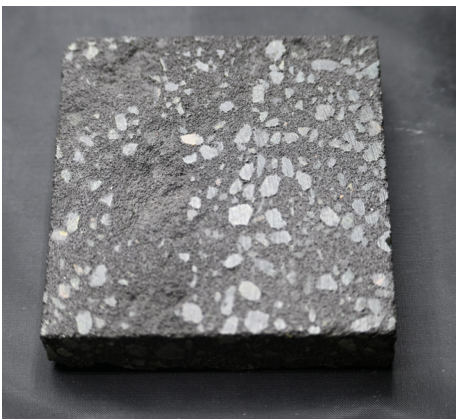

---

**Polished** Architectural Series, which uses advanced technology to achieve a high-shine, polished finish on concrete masonry units (CMU) and precast products. This series offers a light-reflective, polished surface as an alternative to tile veneer, combining the aesthetic appeal with the durability and cost-effectiveness of a CMU.

**Ultra-Fine** Architectural Series feature a unique mix with finer aggregate and extra cement, combined with premium-graded sands, resulting in a smoother, satin-like texture on smooth-face architectural units.

**Rock Face** Architectural Series features a full-face split that elevates the look of CMUs, enhancing any project affordably. Available in structural or veneer options.

**Travertina™** Architectural Series offers a refined, sophisticated look inspired by the natural beauty of travertine stone. Its distinctive linear veining and subtle surface variations create a timeless, elegant aesthetic perfect for both modern and classic architectural designs.

---

**Burnished** Architectural Series features a smooth-faced concrete masonry unit (CMU) achieved by grinding the surface to reveal the natural beauty of the aggregate within the block. It is available in both structural and veneer options.

**BrushHammered** Architectural Series features a design inspired by washed river rocks, offering a visually appealing texture with a soft, tactile feel that highlights the aggregates. Perfect for interior accents.

**BushHammered** Architectural Series showcases a compact, pockmarked texture that delivers a rugged, weathered look while preserving the color and aggregate—ideal for exterior applications.
