Project Spotlight: Erickson Plaza

Built for Belonging

Erickson Plaza

FROM UNUSED SPACE TO COMMUNITY PLACE

Erickson Plaza at Ascension Episcopal Church in Stillwater, Minnesota, transformed a steep, underutilized area of the church property into a welcoming outdoor destination. Designed for worship, fellowship, performances, and community events, the new plaza creates a functional gathering space that extends the church's ministry beyond its walls.

DESIGNED FOR GATHERING

The plaza's curved terraces create a natural amphitheater for worship, performances, celebrations, and community events. Accessible walkways connect the different levels, while integrated seating and landscaping soften the hardscape and create an inviting environment that feels

BUILT TO OVERCOME THE GRADE

Transforming the inaccessible bluff required a design that worked with the site rather than against it. Curved VERSA-LOK retaining walls manage significant elevation changes while creating usable terraces, and thoughtfully placed walkways and stairs connect each level—turning challenging terrain into an accessible, functional part of the church campus.

MATERIALS THAT BRING IT TOGETHER

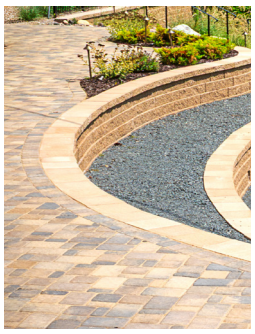

Willow Creek Cobblestone in Lakeshore Blend and VERSA-LOK Standard in Prairie Tan were selected to complement the church's historic architecture and surrounding landscape. Their complementary tones and textures create continuity throughout the plaza, while providing the durability needed for a space designed to welcome worshippers and the community for years to come.

PROJECT MATERIALS		COLOR
PAVERS:	Willow Creek Cobblestone	Lakeshore Blend
RETAINING WALL:	VERSA-LOK Standard	Prairie Tan
CAPS:	VERSA-LOK A Cap & B Cap	Prairie Tan
